

Project Name:E-Navigation

Domain : Mobile application & React Native(MERN)

Project Description:

React Native based mobile platform provides navigation for visitors to search, discover, and learn more about various exhibits of a museum.

Technical Description :

1. Homepage receives visitor's details and start and destination positions which is developed using React Native.
2. Mongo-db is used to store the Map Details and user details.
3. Rendering the maps from service providers and positioning/navigation algorithms is developed by using Javascript SDK.
4. The Android Application package(APK) will be provided in the QRcode format so that the visitors can scan it and use the mobile application.
